

Flush Mount Kit for Merlin 1000 range: AGSFMK

Kit includes mounting bracket and decorative finishing strip.

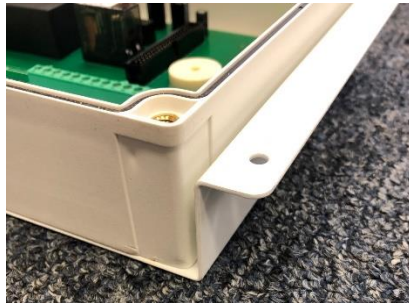

The bracket is designed to cradle the Merlin control panel and hold it securely in place within a standard constructed inner wall. The wings of the bracket should sit on to stud work, leaving the fascia panel proud of the finished surface. The Decorative strip is intended to cover up any cut-in work and any hardware used to fix the bracket in place.

Use #8-32 3/8" Machine Screws or Similar to mount the Merlin Control Panel

We recommend that the installer frames out any stud work to meet the required 10+1/2" gap to accept the mounting bracket.

The bracket is designed to be mounted directly to stud work behind drywall, allowing the decorative strip to sit flush with the fascia panel, proud of the finished surface.

These instructions are only intended as a guide and do not override any local or national code requirement. Any questions with installation should be directed to the technical team at American Gas Safety.
