

Gym Air Quality & Energy Saving Solution

Carbon Dioxide Protection & Air Quality Monitoring

Advanced Indoor Air Quality Sensing Technology

Incredibly Easy to Use & Install

- ✓ Dual powered 110vAC or 24vAC for plug and play installation
- ✓ Ventilation activation boost, mute and screen wake up buttons
- ✓ User friendly settings menu

LIFE SAFETY WITH ENERGY SAVINGS

The Merlin CO2 TFT is designed to monitor carbon dioxide (CO₂) in the air, local temperature and can be used to provide not only a clean breathing air environment but also an energy saving solution.

Typically, in gym areas a mechanical fan constantly runs on a low speed until an occupant sensor detects movement and ramps up the fan to the pre-set setting. To provide an energy/cost saving on the energy used by a mechanical fan, the Merlin CO2 TFT can be used to automatically ramp the fan speeds up and down dependent on the levels of CO₂ & temperature in the room therefore saving on the overall use of electricity.

The AGS solutions are already protecting hundreds of commercial & domestic properties across the U.S. Intuitive and accessible design makes the AGS range easy to specify, easy to install and very user friendly. Modern components compliment years of industry experience to provide a tidy solution to classroom & office safety.
